## EDUCATION

<b>University of Illinois at Urbana-Champaign</b> <i>Bachelors of Science in Computer Engineering</i>	GPA: 3.72/4.00 Graduation: May 2027
<b>Relevant Coursework:</b> Data Structures and Algorithms ( <b>C++</b> ), Operating Systems ( <b>C</b> , <b>RISC-V</b> , <b>UART</b> ), FPGA Lab ( <b>SystemVerilog</b> , <b>AXI</b> , <b>SPI</b> ), GPU Parallel Programming ( <b>CUDA</b> ), Digital Signal Processing, Analog Signal Processing, Advanced Probability	

## EXPERIENCE

<b>Systems Programming Course Staff</b> <i>University of Illinois at Urbana-Champaign</i>	Aug 2025 – Present <i>Champaign, IL</i>
• Mentored 30+ students weekly, providing technical feedback for <b>C</b> , <b>C++</b> and <b>Assembly</b> projects	
<b>Undergraduate Research Assistant</b> <i>Parasol Lab, University of Illinois at Urbana-Champaign</i>	May 2025 – Present <i>Champaign, IL</i>
• Benchmarked <b>C++ STAPL</b> and <b>STL</b> algorithm runtimes across 64 samples (99% Confidence Interval) • Enabled multi-GPU <b>STAPL</b> execution using <b>C++</b> and <b>CUDA</b> , achieving 100x speedup over CPU base • Streamlined compilation, linking and execution for 25+ <b>MPI</b> configurations via <b>Bash</b> and <b>Linux</b> tools • Automated data visualization using <b>Python</b> to graph runtime metrics, accelerating algorithm analysis	
<b>Robotics Software Mentor/Lead</b> <i>FIRST Robotics Competition Team 4096</i>	Dec 2022 – Aug 2024 <i>Champaign, IL</i>
• Used <b>CAN</b> bus to control 30+ motors across 8 subsystems, enabling reliable low-latency communication • Deployed computer vision <b>AI</b> object detection to provide operator feedback, reducing cycle times by 30% • Managed <b>Git</b> workflows to ensure effective parallel development among 7 software team members	

## PROJECTS

<b>Camera Vision Pipeline on FPGA</b>   <i>SystemVerilog, RTL Design, I2C, Vivado</i>	Nov 2025 – Dec 2025
• Designed real-time camera video streaming pipeline in pure <b>RTL</b> , achieving sub-microsecond latency • Initialized 40 camera registers via <b>I2C</b> with a custom <b>SystemVerilog</b> controller for stable color output • Implemented filters and UV thresholding in <b>SystemVerilog</b> with line buffers for seamless edge detection • Integrated <b>Vivado</b> XADC IP-based brightness dial with 128 discrete levels for precise luminance scaling	
<b>Interactive Thermometer</b>   <i>Oscilloscope, Multimeter, Circuit Design</i>	Feb 2025 – May 2025
• Built a temperature measurement circuit with op-amps and comparators, supporting a range of 0–99 °C • Designed an analog-to-digital stage to drive 7-segment displays showing temperature and user thresholds • Verified signal integrity, temperature, and threshold accuracy using an <b>Oscilloscope</b> and <b>Multimeter</b>	
<b>24-Hour Clock</b>   <i>Arduino IDE, C++, Circuit Design</i>	Feb 2025
• Built an Arduino-based 24-hour clock using <b>C++</b> to display time with precise minute-level accuracy • Implemented multiplexed control for 4x7-segment displays, reducing I/O to 11 pins with 4 ms cycles • Integrated a potentiometer interface converting analog input to time values for real-time calibration	

## SKILLS

**Programming:** C, C++, SystemVerilog, Verilog, Python, CUDA, Bash, Java

**Protocols/Interfaces:** I2C, UART, SPI, CAN, AXI-4 Lite

**Tools:** Git, Linux, GDB, Vivado, MPI, NVIDIA NSight, Docker

**Hardware:** Oscilloscope, Logic Analyzer, Function Generator, Multimeter, Soldering
